UNIVERSITY

(Estd. u/s 3 of UGC Act 1956)

Vellore - 632 014, Tamil Nadu, India

**SCHOOL OF COMPUTER SCIENCE AND ENGINEERING**

**FALL SEMESTER 2026-2027**

**Case Study**

**Course : Cloud Architecture Design**

**Course Code : BCSE355L**

**Slot no : A2 slot**

You are a developer at a startup tasked with building a prototype web application using services available in the AWS Free Tier.

The application consists of the following components:

- Frontend: Static files such as HTML, CSS, and JavaScript are hosted in an Amazon S3 bucket and must be publicly accessible.
- Backend: The dynamic application and database-related processing are hosted on two Amazon EC2 instances, referred to as Server1 and Server2.

To improve availability, scalability, and performance, configure a Load Balancer in front of Server1 and Server2. The Load Balancer should distribute incoming dynamic requests across the two EC2 instances.
